

VP, Engineering (Developer)

Company Description:

Envested is a social network giving platform targeted to the millennials. Our platform provides an engaging, social, transparent and centralized way to direct your philanthropic giving – in your local community and beyond. We take an analytical approach leveraging insights and research from a field emerging at MIT called Social Physics.

We currently have 4 full time employees: the CEO/Founder, Community Partnerships lead, UX Design Manager and a Community Operations Manager. The company was launched in September 2015 and our product was released in March 2016.

Role and Responsibilities:

This person will lead the development for our technology platform (iOS, Android, web). Specifically, they will guide the architecture and platform decisions around feature integration, analytics (short term and long term) and Parse backend for the software. They will be responsible for moving Parse to a new backend system. Additionally, they will manage the internal admin and management tools.

They will manage interns and external contractors.

Skills and Requirements:

- 5+ years of software development, preferably at a high-growth technology company
- Strong experience with Android, iOS and AWS or Google cloud
- Full stack fluency — you'll own architecture, development, and interface decisions
- BS or MS in Computer Science or equivalent hacking experience
- Direct management experience preferred
- A passion for delivering great user experiences and working through complex problems
- Familiarity with Parse
- Bonus points for cybersecurity experience
- Building out analytics infrastructure. Not afraid to work on design and UX
- Excellent written and verbal communication
- US citizen – sorry that we can't sponsor
